

Osteoporosis the sneaky illness

Products protected by valid patents are not offered for sale in countries, where the sale of such products constitutes a patent infringement.

Most women enter the menopausal between the ages of 45-55 years. This is a period of physical and hormonal changes with a big impact on women well-being. Symptoms of menopause are hot flushes and night sweats, body aches and pains, dry skin, loss of libido, sleeping difficulties, irritability, or bones mass loss (osteoporosis). These symptoms may be treated with hormonal therapies or natural products and in case of osteoporosis with appropriate medicaments.
